Supporting the evolution of Open Access publishing

Sustainable, high-quality OA publishing requires either funding to be available to pay for Article Processing Charges, sponsorship, or suitable embargo periods. This limits which journals, disciplines, and fields can shift to OA, a process that requires the support of the relevant research community, scholarly societies, and associations.

For the foreseeable future, we expect a mixed business model publishing industry. In some areas, gold OA will be the best option; in others it will be the subscription model, with provision for green OA after specified periods. As the academic and professional communities evolve and adjust this mix, OUP will continue to drive and support progress in this area.

OUP operates two different open access models:

- An **optional open access** model (*Oxford Open*) for the majority of our journals. Please see the individual journal home pages to find out whether they offer optional open access.
- OUP also publish fully open access journals

Article-level metrics

Researchers, funders and institutions are increasingly concerned about the impact and return-on-investment of their work. Article-level metrics are designed to help authors assess this by providing a better understanding of the reach of an article or published research, and the attention it is receiving online.

Oxford University Press now provides access to the number of online views of each article, the number of citations to each article, and the Altmetric score of each article. These metrics can be accessed by clicking on the ‘View Metrics’ link on each article web page.

Article usage data

The ‘Total Views’ metric indicates the number of times an article has been viewed on the Oxford Academic Platform in the time period shown. This metric is the sum of ‘Pageviews’ which are views of the full-text web page

Between 1813 and 1860, Jean-Auguste-Dominique Ingres made five paintings and one signed drawing and supervised the production of four prints, all on the theme of the Renaissance master Raphael and his legendary lover and portrait subject, the Fornarina (Fig. 1). At his death in 1867 a final painted version remained unfinished. Even at that late date the artist's investment in what clearly was a particularly meaningful subject for him remained undiminished: Ingres wrote that he hoped this 'dernière édition' would erase the memory of those that preceded it.¹ These pictures have attracted considerable artistic interest and art-historical interpretation. Recognised, on the one hand, as prime examples of Ingres's habitual working method, based
