Abstract: The article discusses nuclear power and climate change. Nuclear power redevelopment is the central worldwide hot issue as climate change is now a permanent and inevitable phenomena that must be dealt with. World energy marketplace shifts make the energy topic serious as the industry publicists predicted spurts in construction after rising global temperatures became priority issue. Population increase and energy shortage is pushing the problem into alarming state of fuel prices shift, technology change, and uncertain policies.

How to Cite Images

When referencing images that come from articles, it is perfectly acceptable to cite the parent article.

If you want to specifically cite the image, use the article citation and make the following changes:

1. Check the article content for additional source information, such as a photographer or illustrator.
* If an alternate name is available, use that in place of the article's author(s).
2. If the image has a title or caption, use that in place of the article title.
3. After the article or image title and before the journal title, insert the image type.
Image types are: Chart, Diagram, Graph, Illustration, Map, or Photograph.
4. Replace the page range of the article with the page number for the image.
