Welcome to the Journals pages of **informa world**™, where the specialist products and services from [Taylor & Francis](#), [Routledge](#) and [Psychology Press](#) come together in one dedicated resource.

**informa world**™ combines improved accessibility with your own customisable features so that the information you need is readily available when you need it most.

#### Unmissable AAG sessions

Click here for Routledge sessions at this week's **Association of American Geographers (AAG) conference**, plus FREE access to selected articles. We hope to see you at booths 703-711!

#### NEW SECTION

##### Women & Performance

We are pleased to introduce a new section to **Women & Performance**, simply titled "&", which features artists' statements, polemics, review essays, performance texts, manifestoes, feminist and queer takes on current events and debates, and other modes of intellectual production that are too wily to conform to the standard model of academic publishing or that perform feminist theory along different lines of flight, at different speeds, in rogue forms.

[Find out more about this new section](#)

NEW LOOK PROMETHEUS FOR 2010 – FREE ISSUE OUT NOW!

#### Prometheus

The first issue of 2010 is **FREE** to view online and contains an interesting selection of papers on innovation and a debate on Open Access publishing.

[Visit the journal homepage](#) for more information and to view contents.

WORLD WATER DAY 2010

In support of **World Water Day 2010** Routledge, have selected over 100 research articles which engage with the UN World Water day themes of sustaining healthy ecosystems, increasing water quality, access to clean water and contemporary challenges in water management. These articles are available free for the next **30 days**.

### Abstract

Dry beans are grown extensively throughout the western Great Plains. The high-pH soils prevalent in this region limit the availability of many micronutrients, especially iron. In 2002 a Goshen County, Wyoming farmer observed that pinto beans intercropped with annual ryegrass did not exhibit iron-deficiency chlorosis and produced higher yields than beans grown with pinto beans alone. In 2006, the same farmer returned to the farm in 2006 to determine if a ryegrass intercrop results in increased iron concentration in pinto beans. Treatments included pinto beans alone, pinto beans with ryegrass residue incorporated in the soil, and beans planted alone. Soil iron concentration increased for all treatments ( $p < 0.10$ ) over the first sampling interval in the plots with ryegrass compared to beans alone. Iron concentration decreased over the study period with a steep decline over the first sampling interval in the monoculture plots compared to beans alone.

### Abstract

Dry beans are grown extensively throughout the western Great Plains. The high-pH soils prevalent in this region limit the availability of many micronutrients, especially iron. In 2002 a Goshen County, Wyoming farmer observed that pinto beans intercropped with annual ryegrass did not exhibit iron-deficiency chlorosis and produced higher yields than beans grown without the ryegrass. Field studies were conducted on the same farm in 2006 to determine if a ryegrass intercrop results in increased iron concentration in pinto beans. Treatments included bean-ryegrass intercrop, beans planted in ryegrass residue incorporated in the soil, and beans planted alone. Soil iron concentration increased for all treatments ( $p < 0.10$ ) over the first 76 days of the experiment. There was also significantly more soil organic matter and significantly lower soil pH ( $p < 0.10$ ) in plots with ryegrass compared to beans alone. Iron concentration declined steeply over the first sampling interval in the monoculture plots compared to bean-ryegrass plots.

**Keywords:** annual ryegrass; intercropping; iron deficiency; pinto beans; Wyoming

### INTRODUCTION

Over the last 5 years, the value of dry beans in Wyoming has averaged \$12.7 million, making it the fourth most valuable crop in the state after hay, sugarbeets, and barley. Nationally, Wyoming ranks fourth in Pinto bean production with just over 5% of the nation's production (USDA NASS, 2006). In Wyoming, high pH, low soil organic matter, and calcareous soils limit the availability of many micronutrients, especially iron (Ludwick, 2002; Stevens and Belden, 2005). Micronutrient availability can be a critical limitation on bean production and health (Yu and Rengel, 1999). Iron deficiency under these conditions is not the result of low iron concentration in soil but rather of low iron availability (Mengel and Geurtzen, 1986). Symptoms of iron deficiency include interveinal chlorosis, the appearance of necrotic spots on the leaf, and higher susceptibility to insect and disease damage resulting in reduced yield and quality (Stevens and Belden, 2005). Conventional management of iron deficiency in beans is achieved by multiple foliar applications of 1% iron sulfate solution applied at 187 to 282 l ha<sup>-1</sup>, or similar application of even more expensive iron chelates at approximately half the rate of iron sulfate (Stevens and Belden, 2005). A non-chemical cultural practice

### Taylor & Francis Encyclopedias

Written and edited by leading professionals and scholars, these distinguished reference works (formerly published under the Marcel Dekker imprint) are trusted worldwide for their authority, comprehensiveness, and substantial research tools. Now online, these resources are enriched with regular updates and a host of valuable features!

Setting a gold standard in the publishing industry, the **Dekker Agropedia Collection** will stand as the most trusted compilation of resources in the agricultural sciences.

The Collection offers: Quick and convenient perusal of highly influential topics including: food, water, crop engineering pest management, animal maintenance, and soil cultivation. Constant updates guaranteeing a wealth of new information every year Editorial and advisory boards comprised of recognized specialists, pioneering scholars, and key-note researchers.

*Perpetual Access

### Abstract

Active packaging may be defined as packaging that changes the condition of the packaged food to extend shelf-life or to improve safety or sensory properties, while maintaining the quality of the food. In the literature other definitions are also given.<sup>1,21, 2</sup> The above definition was jointly drafted by the participants of the ongoing European FAIR project "Evaluating safety, effectiveness, economic-environmental impact and consumer acceptance of active and intelligent packagings (Actipak)."<sup>3,43, 4</sup>

Food condition in the definition of active packaging encompasses various aspects that may play a role in determining the shelf-life of packaged foodstuffs, such as physiological processes (e.g., respiration of fresh fruits and vegetables), chemical processes (e.g., lipid oxidation), physical processes (e.g., staling of bread, dehydration), microbiological aspects (e.g., spoilage by micro-organisms), and infestation (e.g., by insects). These conditions can be regulated in numerous manners through the application of appropriate active packaging systems. Depending on the requirements of the packaged food, food quality deterioration can be significantly reduced. In this manner the desired shelf-life extension of the packaged food can be achieved. In recent years many different packaging systems have been developed in response to increasing trends in consumer preferences towards fresh, mildly preserved, tasty, and convenient food products with a prolonged shelf-life.

Active packaging systems are sometimes compared with modified atmosphere packaging (MAP). The difference between MAP and active packaging is that MAP is a passive system

### Abstract

Active packaging may be defined as packaging that changes the condition of the packaged food to extend shelf-life or to improve safety or sensory properties, while maintaining the quality of the food. In the literature other definitions are also given.<sup>1,2,1, 2</sup> The above definition was jointly drafted by the participants of the ongoing European FAIR project "Evaluating safety, effectiveness, economic-environmental impact and consumer acceptance of active and intelligent packaging (Actipak)."<sup>3,4,3, 4</sup>

Food condition in the definition of active packaging encompasses various aspects that may play a role in determining the shelf-life of packaged foodstuffs, such as physiological processes (e.g., respiration of fresh fruits and vegetables), chemical processes (e.g., lipid oxidation), physical processes (e.g., staling of bread, dehydration), microbiological aspects (e.g., spoilage by micro-organisms), and infestation (e.g., by insects). These conditions can be regulated in numerous manners through the application of appropriate active packaging systems. Depending on the requirements of the packaged food, food quality deterioration can be significantly reduced. In this manner the desired shelf-life extension of the packaged food can be achieved. In recent years many different packaging systems have been developed in response to increasing trends in consumer preferences towards fresh, mildly preserved, tasty, and convenient food products with a prolonged shelf-life.

Active packaging systems are sometimes compared with modified atmosphere packaging (MAP). The difference between MAP and active packaging is that MAP is a passive system, whereas active packaging plays an active role during storage and transport. Besides, active packaging systems employ a wide range of technologies, each selected to deal with specific problems, while MAP is based on one technology only.

In the United States, Japan, and Australia, active packaging systems are already being successfully applied to extend shelf-life while maintaining nutritional quality and ensuring microbiological safety. Examples of commercial applications include the use of oxygen scavengers for sliced processed meat, ready-to-eat meals and beer, the use of moisture absorbers for fresh meat, poultry, and fresh fish, and ethylene-scavenging bags for packaging of fruit and vegetables. In Europe, however, only few of these systems have been developed and are being applied by now. The main reasons for this are legislative restrictions and a lack of knowledge about their acceptability to European consumers, the efficacy of such systems, and the

## COUNTER Usage Reports

## 2007-2010 COUNTER Usage Reports are now available online.

Please note: The requested report will be delivered immediately, if already available, otherwise it will be compiled and sent to your preferred email address. New 2009 reports will be delivered by email within one hour, although at peak times it may take longer to compile a report the first time it has been requested. If you have not received a report within eight hours, please contact our Customer Service Department, [support@informaworld.com](mailto:support@informaworld.com), who will be happy to work with you to retrieve your report.

Making the most of your subscriptions

### Welcome

For the first time, the electronic resources of Taylor & Francis, Routledge and Psychology Press are brought together in one searchable interface. For your readers, searching is easier. For you, managing your resources is easier. These pages are designed to help you manage your resources and help you and your customers make the most out of **informaworld™**.

### GETTING STARTED

Before you begin to explore **informaworld™** why not take a guided tour of the features we offer in our **informaworld™ Guide for Librarians** (3Mb)

#### Existing customer?

If your library is an existing customer your account has been transferred, you will be IP recognised and you will have access to your subscriptions. If you have been IP recognised you will see your organization name in the top left of the page.

A user name and password for managing your **informaworld™** account has been sent to the registered email address for your organisation. Please retrieve these details and sign in to start managing your account. If you have misplaced your details, you can [request a reminder](#).

When we receive a new order with a new contact address, an email will be sent to the contact provided with the order. You will be asked to select a link within the email in order to add the subscription to your account.

With regards to subscription agent consolidation accounts, these all have customer information attached to each order and would therefore work in exactly the same way as the above.

#### New customer?

If you purchase a subscription via the website then your access will be immediate. If you purchase a subscription through an agent, or directly with our customer service department, an **informaworld™** account will be created for you and access will be activated. Notification of your access details will be sent to you by email.

You should then sign in to your account to add your IP address details.
