Gale Literary Sources Gale文学资源

内容组成

文学资源中心

Gale文学旗舰产品，文学辅助参考资源的在线综合解决方案

LitFinder数据库

收录文学作品全文

Twayne 作家系列电子参考书

Scribner 作家系列电子参考书

传记:

- 来自Gale 知名的系列丛书如《当代作家》、《文学传记词典》等
- 总共超过155,000位世界范围内的、跨时代的**作家的传记**和书目
- 11,000多份当代作家的采访资料
- 2500多张**作家图片**和肖像

文学评论:

- 选自, 超过85,000篇文学评论文章(*CLC*, *TCLC*, *NCLC*, *CMLC*Gale集团出版的众多著名文学评论系列参考书, etc.) ---独家版权
- 来自于488份全球**全文期刊**的丰富信息, 包括文学、语言学、作家介绍等期刊, 提供超过1,700,000篇文章

其他补充资源：

- 超过7,000篇作品/人物的概述，注解，分析，评论
- 超过78,000篇书评、戏评及影评
- 3,000多个链接到 National Public Radio (NPR) 的多媒体影像资料
- 可链接至12,900个经过专家严格挑选的文学和作家的相关站点
- 43,000篇当代诗歌、短片小说和戏剧全文
- 超过10,000条文学术语定义，来自《韦氏文学大百科全书》

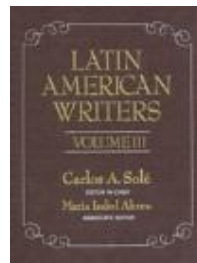

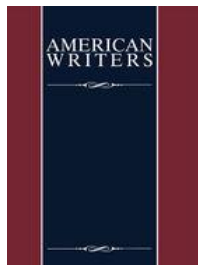

LitFinder数据库

- LitFinder收录知名文学、历史和文化重要人物以及新生代作家的原著作品，例如短篇小说、诗歌、戏剧、小说、演讲和文集
- 涵盖全球各个历史时期的超过80,000名作家其中包含30,000名女性作家的作品
- 收录超过 150,000 篇全文诗歌10,100篇短篇故事及小说，2,000 全文演讲稿件等，800,000 诗歌引文及摘录，
- 该数据库还包括诸如生平、图片等资料

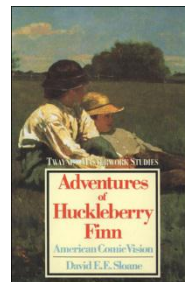

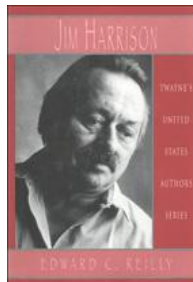

电子参考书——Scribner & Twayne作家系列

该系列提供世界上各个时代有影响力的作家的生平、著作的签字传记和评论文章。内容包括背景资料，评论文章、引文、传记信息。方便使用者将该作者的作品放在个人和历史背景下，通过对其评论的多角度审视进行研究

该系列书籍深入的介绍了作家的生活和作品以及其所生活的时代背景。同时也提供了文学运动的历史和影响的评论，以及文学体裁的发展。

文学百科全书

在线文学索引 Gale Literary Index与 纸本书无缝对接

特色功能:

- 话题查找器
- 术语检索频率

The screenshot shows the Gale Literary Sources homepage. At the top, there's a navigation bar with '退出', '我的图书馆链接', and '中文(简体)'. Below this, the main header 'LITERARY SOURCES' is visible. A red box highlights the navigation menu with four items: 'Gale 文学索引', 'Encyclopedia of Literature®', '个人检索', and '作品检索'. A yellow callout bubble labeled '四种检索方式' points to these items. Another yellow callout bubble labeled '在线文学索引' points to 'Gale 文学索引'. A third yellow callout bubble labeled '文学百科全书 / 词典' points to 'Encyclopedia of Literature®'. The main content area features a large image of book covers with the text '发现文学作品、作者和评论'. Below this is a search bar with the placeholder text '检索现代小说'. Further down, there's a section titled '什么是 Gale Literary Sources?' with a description of the platform's features. A yellow callout bubble labeled '特色功能' points to this section. At the bottom, there are two boxes: '话题查找器' (Topic Finder) and '术语检索频率' (Term Frequency). The '话题查找器' box includes a circular icon and the text '使用话题查找器, 浏览检索词的上下文并揭示隐藏的关联'. The '术语检索频率' box includes a line graph icon and the text '为检索结果绘制图表, 以查看一个或多个术语在某个时间段内的趋势'.

The Plot Against America: Philip Roth's counter-plot to American history

Jason Siegel

MELUS. 37.1 (Spring 2012): p131. From *Literature Resource Center*.

Copyright: COPYRIGHT 2012 Oxford University Press
<http://webSPACE.ship.edu/kmlong/melus/>

Full Text:

"There's the not-so that reveals the set--that's fiction."

--Philip Roth (Exit 120)

"One can produce an imaginary discourse about real events that may not be less 'true' for being 'imaginary.'"

--Hayden White (57)

Philip Roth's *The Plot Against America* (2004), which presents an alternate history of the United States during the years 1940-42, has been interpreted by reviewers and critics as a social satire, a cautionary tale, and a veiled allegory of the George W. Bush administration. I draw on Linda Hutcheon's theory of historiographic metafiction to examine Roth's exploration and revision of the ways we represent and comprehend history. Specifically, I posit that Roth submits his counterfactual history not as a tendentious fictional commentary on "real life," but as a true history that challenges

postmodern [pōst-mäd-ərn]

Of or relating to any of several artistic movements that have challenged the philosophy and practices of modern arts or literature since about the 1940s. In literature this has amounted to a reaction against an ordered view of the world and therefore against fixed ideas about the form and meaning of texts. This reaction is reflected in eclectic styles of writing through the use of such devices as pastiche and parody as well as in the development of such concepts as the absurd, the antihero and the antinovel, and magic realism. The perception of the relativity of meaning has also led to a proliferation of critical theories, most notably deconstruction and its offshoots.

poststructuralism [pōst-štrɛk-chə-rə-lɪz-əm]

Movement in literary criticism conceived in France in the late 1960s. Based on the linguistic theories of Ferdinand de Saussure and the deconstructionist theories of Jacques Derrida, poststructuralism is centered around the idea that language is inherently unreliable and thus cannot possess absolute meaning in itself. Poststructuralists believe that all meaning resides in intertextuality, or the relationship of the text to past and future texts.

Like the practitioners of reader-response, feminist, Marxist, and psychoanalytic criticism, poststructuralists do not support the traditional Western insistence on a single correct reading of a text. Writers associated with the movement include Roland Barthes, Jacques Lacan, Julia Kristeva, and Michel Foucault. *Compare* DECONSTRUCTION; STRUCTURALISM. *See also* INTERTEXTUALITY.

Gale World History in Context. 2017.

COPYRIGHT 2019 Gale, a Cengage Company

全文：

Introduction

The oldest of the three monotheistic religions, Judaism, is founded on the Old Testament. Together with the law set down in the Hebrew scriptures, there are also texts that record oral traditions passed down from the time of Moses, additional law codes, and rabbinical commentaries.

The theological basis of Judaism is governed by the concept of one God, just and good, and the struggle between Divine plan and Man's will. When Man defies God's will, the subsequent punishment is reflected in humanity's imperfect condition; however, reconciliation is possible through repenting, and God will ultimately restore that perfection. Judaism also has a rich intellectual and philosophical tradition, involving questions and conundrums arising from balancing rational thinking and the laws of nature with the teachings of the Scriptures and the principle of God as the source of all truth.

Three schools of Judaism developed in the nineteenth century: Reform Judaism, Conservative Judaism, and Orthodox Judaism, each adopting certain elements of traditional Judaism. Reform Judaism recognizes the legitimacy of change and translates that belief into changes in doctrine, liturgy, and a way of Jewish life. Orthodox Judaism, stringent and generally inflexible in its adherence to the "letter of the law," does not accept the legitimacy

<p>Company Overview</p> <p>Exxon Mobil Corporation (ExxonMobil) is an integrated global oil and gas company. The company's worldwide retail operations and production of oil and gas, refining, transportation and marketing of oil and natural gas, and manufacture and sale of petroleum products. ExxonMobil also has interests in petrochemicals and electricity generation facilities. The company manages three separate business segments: Retail, Chemical, and Downstream and Chemical. It offers products and services under various brands such as Exxon, Esso and Mobil. ExxonMobil is headquartered in Irving, Texas, the US. ExxonMobil is operating its operations and producing in unconventional gas resource assets.</p> <p>SWOT Analysis</p> <table border="1"> <tr> <td>Strengths</td><td>Weaknesses</td></tr> <tr> <td>Integrated Refining and Chemical Operations</td><td>Pending Litigation</td></tr> <tr> <td>Geographical Diversification</td><td>Fluctuating Oil Prices</td></tr> <tr> <td>Opportunities</td><td>Threats</td></tr> <tr> <td>Expansion in Unconventional Assets</td><td>Stringent Tax Policies</td></tr> <tr> <td>Strategic Growth Initiatives</td><td>Stringent Regulation for Deep Offshore Drilling</td></tr> <tr> <td>New LNG Projects</td><td>Water Contamination Concerns</td></tr> <tr> <td>Source: GlobalVantage</td><td></td></tr> </table> <p>Financial Performance</p> <p>The company reported revenues of U.S. Dollars (USD) 488,429.0 million during the fiscal year ended December 31, 2011. Nuclear Energy

OVERVIEW

When the nucleus of an atom is divided or joined to another nucleus, an enormous amount of energy is produced. When these processes of fission (division of the nucleus of an atom) or fusion (joining the nucleus of an atom with another) take place under controlled conditions, this energy can be used to drive turbines that can do work: for example, to propel a large vehicle such as a ship or to generate electricity. These same processes, however, can be adapted to produce weapons with massive destructive power. Nonmilitary uses of *nuclear power* refer to the generation of energy through a controlled process of fission in a nuclear reactor.

According to figures of the Power Reactor Information System (PRIS) of the International Atomic Energy Agency (IAEA), an independent international organization that was established in 1957 to promote the safety and security of the peaceful use of nuclear science and ... [VIEW FULL OVERVIEW](#).

Nuclear Power

Johan Hattingh. *Encyclopedia of Environmental Ethics and Philosophy*, Vol. 2, 2009.

 Listen 

When the nucleus of an atom is divided or joined to another nucleus, an enormous amount of energy is produced. When these processes of fission (division of the nucleus of an atom) or fusion (joining the nucleus of an atom with another) take place under controlled conditions, this energy can be used to drive turbines that can do work: for example, to propel a large vehicle such as a ship or to generate electricity. These same processes, however, can be adapted to produce weapons with massive destructive power. Nonmilitary uses of *nuclear power* refer to the generation of energy through a controlled process of fission in a nuclear reactor.

NUCLEAR POWER THROUGHOUT THE WORLD

According to figures of the Power Reactor Information System (PRIS) of the International Atomic Energy Agency (IAEA), an independent international organization that was established in 1957 to promote the safety and security of the peaceful use of nuclear science and technology, there were at the beginning of 2008 a total of 439 nuclear power plants in operation in the world in 30 countries, with a total net installed capacity of 372,202 Gigawatts. At this time, there were also five nuclear power plants in long term shutdown, whilst 34 nuclear power plants were under construction (IAEA 2008). At the end of 2006, there were 103 licensed nuclear power plants in the United States located at 65 sites, predominantly situated in the eastern half of the country. As of 2008, about 20 percent of the electricity used in the United States is generated by nuclear reactors, placing nuclear power second to electricity generated by coal (IAEA 2003a: 7–9; IAEA 2007a). In comparison, over 78 percent of the domestic energy production in France comes from its 59 nuclear reactors (IAEA 2007a). Other countries with relatively large numbers of nuclear reactors include Japan (with 55 operational nuclear reactors that generate 30 percent of its electricity), Russia (with 31 reactors that generate about 16 percent of its electricity), South Korea (with 20 reactors that generate about 39 percent of its electricity), the United Kingdom (with 19 reactors that generate just over 18 percent of its electricity), Canada (with 18 reactors that generate about 16 percent of its electricity), Germany (with 17 reactors that generate about 32 percent of its electricity), and Ukraine (with 15 reactors that generate 47.5 percent of its electricity) (IAEA 2007a).

In its *Annual Report 2006*, the IAEA (2007b: 3) points out that about three-quarters of the world's operating nuclear reactors are 20 or more years old. Since the life span of a nuclear reactor is between 20 and 40 years, depending on the type of technology and design used, it can be expected that decisions about decommissioning a large number of nuclear plants, as well as investing large sums of money to replace these reactors will have to be made over the next two decades. The British government already announced in January 2008 that up to 10 new nuclear reactors will have to be built in the United Kingdom by 2020 in order to replace those that need to be decommissioned. Similarly, Russia announced in March 2008 that it will put four new nuclear reactors into operation by 2020.

Emergency preparedness for the accidental release of radionuclides from the Ulin Nuclear Power Plant in Korea.(Report)

Soon-Ung Park, In-Hye Lee, et al. *Journal of Environmental Radioactivity*, Dec 1, 2017.

Listen

Abstract:

To access, purchase, authenticate, or subscribe to the full-text of this article, please visit this link: <http://dx.doi.org/10.1016/j.jenvrad.2017.09.012>

Byline: Soon-Ung Park [supark@snu.ac.kr] (*), In-Hye Lee [masaki0720@naver.com], Seung Jin Joo [joo.seungjin@yahoo.co.kr], Jae-Won Ju [jujae1@hanmail.net]

Keywords

Lagrangian Particle Dispersion Model; Eulerian Particle Dispersion Model -- East Asia; Dispersion of radionuclide (137Cs); Emergency response modeling; Effective radiation dose

Highlights

- * An emergency response model for radionuclides is developed.
- * Lagrangian Particle Dispersion Model is useful for the emergency preparedness.
- * Eulerian Dispersion Model is useful for the long-range transport of radionuclides.
- * The dispersion data base for 72 synoptic cases in a year was archived by LPDM.
- * The data base could be used effectively for the on-time emergency preparedness.

Abstract

Site specific radionuclide dispersion databases were archived for the emergency response to the hypothetical releases of .sup.137Cs from the Ulin nuclear power plant in Korea. These databases were obtained with the horizontal resolution of 1.5 km in the local domain centered the power plant site by simulations of the Lagrangian Particle Dispersion Model (LPDM) with the Unified Model (UM)--Local Data Assimilation Prediction System (LDAPS). The Eulerian Dispersion Model--East Asia (EDM--EA) with the UM--Global Data Assimilation Prediction System (UM-GDAPS) meteorological models was used to get dispersion databases in the regional domain. The LPDM model was performed for a year with a 5-day interval yielding 72 synoptic time-scale cases in a year.

Nuclear Proliferation Case Studies

Appendix to [Safeguards to Prevent Nuclear Proliferation](#)

(Updated August 2017)

- North Korea made weapons-grade plutonium using a research reactor and a reprocessing plant in defiance of its NPT obligations. In 2006, 2009, 2013 and 2016 it exploded five nuclear devices.
- In 2002 Iran's previously undeclared nuclear facilities became the subject of IAEA inquiry, which established that it appeared to be in violation of its NPT safeguards agreement. It continued uranium enrichment in defiance of the UN Security Council.
- Iraq to 1991 attempted to enrich indigenous uranium to weapons-grade material, in violation of NPT and safeguards obligations.
- Syria constructed a nuclear reactor in breach of its NPT obligations.

Background

Up to the late 1980s it was generally assumed that any undeclared nuclear activities would have to be based on the diversion of nuclear material from safeguards. States acknowledged the possibility of nuclear activities entirely separate from those covered by safeguards, but it was assumed they would be detected by national intelligence activities. There was no particular effort requiring the IAEA to attempt to detect them.

Not until the 1990 NPT Review Conference did some states raise the possibility of making more use of the provisions for "special inspections" in existing NPT Safeguards Agreements, for example. Special inspections can be undertaken at locations other than those where safeguards routinely apply, if there is reason to believe there may be undeclared material or activities.

However, inspections in Iraq following the 1991 UN Gulf War cease-fire resolution showed the extent of Iraq's clandestine nuclear weapons program, and it became clear that the IAEA would have to broaden the scope of its

23rd International Atomic Energy Agency (IAEA)
Fusion Energy Conference

Global Reference on the Environment, Energy, and Natural Resources Online Collection, 2013.

<http://www-pub.iaea.org/MTCD/Meetings/Announcements.asp?ConfID=38091>

NAME: 23rd International Atomic Energy Agency (IAEA) Fusion Energy Conference

DATE: October 11–16, 2010

LOCATION: Daejeon, Republic of Korea

SPONSORS: International Atomic Energy Agency, National Fusion Research Institute, Yuseung-gu, Daejeon

The International Atomic Energy Agency (IAEA) fosters the exchange of scientific and technical results on nuclear fusion research through the series of its Fusion Energy Conferences. The fusion community now faces new challenges because a number of next-step fusion devices are being implemented. These include the International Thermonuclear Experimental Reactor (ITER, Cadarache, France) and the National Ignition Facility (NIF, Livermore, United States). Other challenges are the need to demonstrate the technological feasibility of fusion powerplants together with the economical viability of fusion energy production. Resolution of these challenges will dictate research orientations in the present and coming decades.
